About me

Fullstack developer with 6 months of commercial development experience
Specializing in FastAPI and Next.js, as well as other technologies
I have experience in deployment, automation, infrastructure setup, and developing production-ready solutions

Open to new opportunities, teamwork, and professional growth in commercial projects

I strive to apply modern technologies and best practices to develop scalable projects

Quickly adapt to new stacks, focus on code quality and results

Skills, technologies, tools

Backend:	Python, FastAPI, Django, PostgreSQL, SQLAlchemy, Aiogram, Apache Kafka
Frontend:	React, Next.js, TypeScript, HTML, CSS, JS, Vue.js (basics), TailwindCSS, Redux & RTK, Sass
DevOps & System Administration	Linux, Bash, Docker, Nginx, Git & GitHub & GitLab, PowerShell, Github Actions, Ansible, Networking

Education

Applied Informatics
Bachelor of Applied Informatics, part-time
2029 · In progress

Languages

Russian — Native

English — Upper-intermediate (B2)

Work experience

Hautte · Luxury real estate and investment assets

Fullstack Developer

December 2025 — May 2026 (6 months)

- Full-cycle web platform development: architecture design, backend implementation (FastAPI) and frontend (Next.js), database design and maintenance (PostgreSQL)
 - Containerization of infrastructure using Docker, ensuring stability and reproducibility of environments
 - CI/CD pipeline setup via GitHub Actions: automation of testing, building, and deployment with minimal downtime
 - Development of responsive UI with 99% pixel-perfect implementation based on UI/UX designs, creation of a reusable component library
 - SEO and technical optimization of the platform: achieved Lighthouse scores of 96–100, Core Web Vitals metrics (LCP up to 2.3s, CLS < 0.2), configured meta tags, semantic structure, and indexing best practices
 - VDS administration: Nginx, SSL, SSH setup, Docker service management, and basic server infrastructure configuration
 - Application performance optimization, code refactoring, elimination of backend and frontend bottlenecks
 - Ensuring platform stability, monitoring, diagnostics, and rapid incident response, uptime 99.9%
-

LLC "Partner" · Plastic Recycling & Processing

System administrator

June 2025 — November 2025 (6 months)

- Website support, maintenance, and debugging (PHP, HTML, CSS, JS)
- Administration, setup, updating, and maintenance of computers
- Installation, configuration, and updating of operating systems and application software (Windows, Linux, 1C, SolidWorks, AutoCAD, etc.)
- Configuration, management, and automation of backup systems
- Writing automation scripts
- Consulting employees on software and hardware usage
- Ensuring information security: antivirus deployment, employee guidance, network infrastructure protection, and management of user accounts and access rights
- Detection and resolution of hardware-related failures and incidents
- Hardware operations: assembly, maintenance, and upgrading of workstations, peripheral device support, and general technical maintenance

Projects

Hautte — Real Estate Platform

Stack: FastAPI, Next.js, PostgreSQL, TypeScript, Nginx, GitLab, Docker

Full commercial real estate platform built from scratch

- Custom admin panel for property and application management
 - Advanced search with filtering by property type, area, and parameters
 - Responsive UI with inquiry and feedback forms
 - **SEO** optimization including meta tags, sitemap, robots.txt, structured data
 - Backend architecture — Service modules
 - Frontend architecture — **Feature-Sliced Design (FSD)**
-

Stashify — Telegram bot for managing educational resources

Stack: Aiogram, PostgreSQL, Docker

Telegram bot for organizing, rating, and discovering educational materials

- User authentication with role-based access control
 - Rating system and favorites
 - Admin panel with CRUD for categories, resources, and quizzes
 - Multilingual interface via Fluent
 - Quiz engine with questions and result tracking
 - Deployment on VDS
-

DDDChat — Realtime chat

Stack: FastAPI, MongoDB, Kafka, Docker

Real-time chat on **FastAPI** using **WebSockets** and **Kafka**

- Scalable high-level advanced event-driven **Domain Driven Design (DDD)** architecture
- Message forwarding via **Apache Kafka**
- Usage **MongoDB** for efficient data storage
- Full integration with Telegram
- Using **WebSockets** for bidirectional real-time sending and receiving of messages
